PAPER

Please find below and/or attached an Office communication concerning this application or proceeding.

The time period for reply, if any, is set in the attached communication.

Office Action Summary

Application No.

10/607,728

Applicant(s)

OLIVER ET AL.

Examiner

Duc T. Duong

Art Unit

2619

-- The MAILING DATE of this communication appears on the cover sheet with the correspondence address --
Period for Reply

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) OR THIRTY (30) DAYS, WHICHEVER IS LONGER, FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If NO period for reply is specified above, the maximum statutory period **will** apply and **will** expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply **will**, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

Status

- 1) ☒ Responsive to communication(s) filed on 04 December 2007.
- 2a) ☒ This action is **FINAL**. 2b) ☐ This action is non-final.
- 3) ☐ Since this application is in condition for allowance except for formal matters, prosecution as to the merits is closed in accordance with the practice under *Ex parte Quayle*, 1935 C.D. 11, 453 O.G. 213.

Disposition of Claims

- 4) ☒ Claim(s) 1-26 is/are pending in the application.
- 4a) Of the above claim(s) _____ is/are withdrawn from consideration.
- 5) ☐ Claim(s) _____ is/are allowed.
- 6) ☒ Claim(s) 1-26 is/are rejected.
- 7) ☐ Claim(s) _____ is/are objected to.
- 8) ☐ Claim(s) _____ are subject to restriction and/or election requirement.

Application Papers

- 9) ☐ The specification is objected to by the Examiner.
- 10) ☐ The drawing(s) filed on _____ is/are: a) ☐ accepted or b) ☐ objected to by the Examiner.
Applicant may not request that any objection to the drawing(s) be held in abeyance. See 37 CFR 1.85(a).
Replacement drawing sheet(s) including the correction is required if the drawing(s) is objected to. See 37 CFR 1.121(d).
- 11) ☐ The oath or declaration is objected to by the Examiner. Note the attached Office Action or form PTO-152.

Priority under 35 U.S.C. § 119

- 12) ☐ Acknowledgment is made of a claim for foreign priority under 35 U.S.C. § 119(a)-(d) or (f).
- a) ☐ All b) ☐ Some * c) ☐ None of:
1. ☐ Certified copies of the priority documents have been received.
2. ☐ Certified copies of the priority documents have been received in Application No. _____.
3. ☐ Copies of the certified copies of the priority documents have been received in this National Stage application from the International Bureau (PCT Rule 17.2(a)).

* See the attached detailed Office action for a list of the certified copies not received.

Attachment(s)

- 1) ☒ Notice of References Cited (PTO-892)
- 2) ☐ Notice of Draftsperson's Patent Drawing Review (PTO-948)
- 3) ☐ Information Disclosure Statement(s) (PTO/SB/08)
Paper No(s)/Mail Date _____.
- 4) ☐ Interview Summary (PTO-413)
Paper No(s)/Mail Date: _____.
- 5) ☐ Notice of Informal Patent Application
- 6) ☐ Other: _____.

DETAILED ACTION

Response to Arguments

1. Applicant's arguments with respect to claims 1, 3-16, 18-23, and 25-26 have been considered but are moot in view of the new ground(s) of rejection.

Claim Rejections - 35 USC § 112

2. The following is a quotation of the first paragraph of 35 U.S.C. 112:

The specification shall contain a written description of the invention, and of the manner and process of making and using it, in such full, clear, concise, and exact terms as to enable any person skilled in the art to which it pertains, or with which it is most nearly connected, to make and use the same and shall set forth the best mode contemplated by the inventor of carrying out his invention.

3. Claims 16-22 are rejected under 35 U.S.C. 112, first paragraph, as failing to comply with the enablement requirement. The claim(s) contains subject matter which was not described in the specification in such a way as to enable one skilled in the art to which it pertains, or with which it is most nearly connected, to make and/or use the invention.

Regarding to claim 16, the specification fails to provide an adequate written support for "an article of manufacture comprising a computer readable medium including a content that when read by a computer causes the computer to...". There is no support for such limitation, and thus the claim lacks enablement.

Claim Rejections - 35 USC § 103

4. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

Art Unit: 2619

5. Claims 1, 2, 4-6, 9-13, 15-19, 21-24, and 26 are rejected under 35 U.S.C. 103(a) as being unpatentable over Chen et al (US Patent 6, 975,638 B1) in view of Lodha (US Patent 7,330,430 B2).

Regarding to claims 1, 11, 16, and 23, Chen discloses an apparatus (fig. 7) comprising a classification unit C1-2 to examine packets received from a network (col. 7 lines 22-26), determine a path (egress port/destination port) to be taken by each packet through a switch fabric 70 (col. 7 lines 26-29), and classify each packet into one of a plurality of flow bundles based on the packet's destination and path through the switch fabric (col. 7 lines 29-45), and label each packet with a flow identifier to identify the associated flow bundle (col. 7 lines 41-43); a mapping unit (CAM) coupled to the classification unit to place each packet into one of a plurality of queues 132 based on the flow bundle to which the packet has been classified (col. 7 lines 24-32); one or more traffic shapers 124-126 coupled to the mapping unit to regulate the rate at which traffic moves in of the queues (col. 7 lines 52-67 and col. 8 lines 1-25); and a scheduler 136 coupled to the traffic shapers to regulate the order in which packets in the queues will be transmitted from the queues to a next destination through the switch fabric (col. 8 lines 45-52).

Chen fails teach for regulating the rates at which traffic moves out of the queues with a traffic shaping algorithm.

However, Lodha discloses a packet-based traffic shaping system comprising a plurality of traffic shapers 106 for regulating the rates at which packets are output from a plurality of queues 104 (fig. 1 col. 4 lines 31-35).

Thus, it would have been obvious to a person of ordinary skill in the art to employ such shapers as taught by Lodha into Chen's system to prevent the scheduler from dequeuing packets at a rate that would exceed the limits of the traffic flow.

Regarding to claims 2, 17, and 24, Chen discloses regulating the rate at which traffic moves out of the queues with a traffic shaping algorithm (col. 7 lines 52-62).

Regarding to claims 4, 15, 18, and 26, Chen discloses labeling each packet with information identifying an associated flow and flow bundle (col. 7 lines 41-43).

Regarding to claims 5 and 21, Chen discloses classifying each packet into one of a plurality of flow bundles based on the packet's destination, path through the switch fabric, and priority (col. 7 lines 29-37).

Regarding to claim 6, Chen discloses scheduling the packets in the queues for transmission using a Round Robin scheduling algorithm (col. 7 lines 46-49).

Regarding to claims 9 and 19, Chen discloses determining which traffic class each received network packet belongs based on protocols associated with the packet (col. 2 lines 3-8).

Regarding to claims 10, 13, and 22, Chen discloses forwarding the packets to a switch 80 coupled to the switch fabric for transmission to the next destination (fig. 3 col. 5 lines 49-51).

Regarding to claim 12, Chen discloses an access unit L1-2 coupled to the classification unit to receive packets from and transmit packets to the network (col. 7 lines 13-21).

Art Unit: 2619

6. Claims 3, 14, 20, and 25 are rejected under 35 U.S.C. 103(a) as being unpatentable over Chen and Lodha in view of Hooman et al (US Patent 7, 155,716 B2).

Regarding to claims 3, 14, 20, and 25, Chen and Lodha disclose all the limitations with respect to claims 1, 11, 16, and 23, except for the classification unit comprises a load balancing element to determine a path to be taken by each packet through a switch fabric based on load balancing. However, Hooman discloses a method and system for scheduling transmission of packets comprising a classifier 314 that serve to provide load balancing (fig. 3 col. 3 lines 47-49). Thus, it would have been obvious to a person of ordinary skill in the art, at the time of the invention, to employ such classifier as taught by Hooman in Chen and Lodha system to avoid overflow in the queues.

7. Claims 7 and 8 are rejected under 35 U.S.C. 103(a) as being unpatentable over Chen and Lodha in view of Duffield et al (US Patent 6,452,933 B1).

Regarding to claims 7 and 8, Chen and Lodha disclose all the limitations with respect to claim 1, except for scheduling the packets in the queues for transmission comprises scheduling the packets in the queues for transmission using a Longest Delay First algorithm (claim 7) or a Stepwise QoS Scheduler SQS (claim 8). However, Duffield discloses a method and apparatus for routing packets in a communication network comprising a scheduler 200 implementing the Longest Delay First algorithm and the Least Time to Overflow algorithm (fig. 2 col. 5 lines 4-25). Thus, it would have been obvious to a person of ordinary skill in the art to employ such scheduler as taught

by Duffield in Chen and Lodha's system for delivery of packets having various properties and criteria requirements.

Conclusion

8. Applicant's amendment necessitated the new ground(s) of rejection presented in this Office action. Accordingly, **THIS ACTION IS MADE FINAL**. See MPEP § 706.07(a). Applicant is reminded of the extension of time policy as set forth in 37 CFR 1.136(a).

A shortened statutory period for reply to this final action is set to expire THREE MONTHS from the mailing date of this action. In the event a first reply is filed within TWO MONTHS of the mailing date of this final action and the advisory action is not mailed until after the end of the THREE-MONTH shortened statutory period, then the shortened statutory period will expire on the date the advisory action is mailed, and any extension fee pursuant to 37 CFR 1.136(a) will be calculated from the mailing date of the advisory action. In no event, however, will the statutory period for reply expire later than SIX MONTHS from the date of this final action.

9. Any inquiry concerning this communication or earlier communications from the examiner should be directed to Duc T. Duong whose telephone number is (571)272-3122. The examiner can normally be reached on M-F (8:00 AM-5:00 PM).

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Wing Chan can be reached on 571-272-7493. The fax phone number for the organization where this application or proceeding is assigned is 571-273-8300.
